Ritalin: Magic Bullet or Black Magic?; 5. Alternative Approaches; 6. Hyperactive Around the World; Conclusion: Happily Hyperactive; References; Select Bibliography; Acknowledgements; Index
Sommario/riassunto	Each year, doctors diagnose an average of nine percent of children between the ages of five and seventeen with attention deficit hyperactivity disorder, or ADHD. One of the most common childhood disorders, it is also one of the most controversial-since first identified in the late 1950's, everyone from medical professionals to politicians have debated its causes, its treatment, and its implications for children. Today, physicians believe it is an inherited neurological disorder best treated with stimulants.Hyperactive provides the first history of ADHD, addressing
