

1. Record Nr.	UNINA9910452747803321
Titolo	Rethinking water management : innovative approaches to contemporary issues // edited by Caroline M. Figueres, Cecilia Tortajada and Johan Rockstrom
Pubbl/distr/stampa	London ; ; Sterling, Va. : , : Earthscan Publications, , 2003
ISBN	600-00-0282-3 9786610476442 1-4175-2243-7 1-136-55825-X 1-136-55826-8 1-280-47644-3 1-84977-240-1
Descrizione fisica	1 online resource (256 p.)
Altri autori (Persone)	FigueresCaroline RockstromJohan TortajadaCecilia
Disciplina	333.91
Soggetti	Water-supply - Management Water resources development - Government policy Water-supply - Management - International cooperation Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Rethinking Water Management; Copyright; Contents; List of figures, tables and boxes; About the contributors; Foreword by Asit K Biswas; List of acronyms and abbreviations; 1. Introduction; 2. Rethinking development paradigms for the water sector; Introduction; Sustainable development; Environmental sustainability of water projects; Case study of Mexico; Conclusions; References; 3. Global and local agendas in water management: From vision to action; Introduction; Global-local agendas in water management: Theory and practice; Research questions Recommended actions: New regionalism for water management in the

Middle East Conclusions; References; 4. Balancing between the eternal yesterday and the eternal tomorrow: Economic globalization, water and equity; Introduction; The different aspects of globalization; Economic globalization and water; Conclusions and recommendations; Notes; References; 5. Managing rain for the future; Introduction; Water and food security: Sorting out the facts; Making more food with the same rainfall; Win-win solutions based on integrated rain management; Conclusions; Notes; References

6. Recycling and reuse of 'derivative water' under conditions of scarcity and competition Introduction; Bridging the scarcity divide: Recycling secondary or 'derivative' water; Management and policy options for effluent irrigation; Case descriptions of planned and unplanned reuse; Conclusions: Next generation issues for derivative water use; Notes; References; 7. Rethinking groundwater management; Introduction; Detrimental impacts of groundwater non-management; A shift in groundwater management approaches: Towards providing incentives for more sustainable use; Conclusions; Notes; References

8. Water rights and their management: A comparative country study and its implication for China Introduction; Legal and economic aspects of property rights; Water resources as common pool resources; Typical water rights assignments and their characteristics; Water rights reform in China: Theoretical and practical explorations towards efficient water resources management; Conclusions; Notes; References; 9. The present and future of transboundary water management; Introduction; The transboundary freshwater dispute database; International institutions and indicators of conflict

Baskets of benefits Why might the future look nothing like the past?; Conclusion: What types of policy recommendations can one make?; Notes; References; 10. Forgetting political boundaries in identifying water development potentials in the basin-wide approach: The Ganges-Brahmaputra- Meghna issues; Introduction; Regional water-based development context; Regional water-resource utilization issues; Regional water-based development potentials; Broad-based conclusions and recommendations; Notes; References; 11. Let's pump money in the water sector!; Introduction; Today's four major challenges Suggested actions to improve the situation

## Sommario/riassunto

If water resources are to be distributed efficiently, equitably and cost-effectively in this rapidly changing world, then it is clear that current water management practices are no longer feasible. Innovative approaches are required to meet the increasing water demands of a growing world population and economy and the needs of the ecosystems supporting them. New approaches have to be employed at global, national and local levels. In Rethinking Water Management, a new generation of water experts from around the world examine the critical challenges confronting the water profession, including ra
