Sommario/riassunto	Orofacial pain - defined as pain lasting over three months in the mouth or face - is increasing in prevalence, with approximately 7% of the UK population having experienced it. It is currently managed by either dentists or general medical practitioners, both of whom have radically different approaches to treatment. While management of orofacial pain has improved quite dramatically over recent years, it is essential that dentists and general practitioners are aware of these advances and of the differences in their approaches. This concise handbook takes an
