system / Brigid McKevith -- Taking the science forward : public health implications / Judith L. Buttriss -- Conclusions of the task force -- Recommendations of the task force -- Healthy ageing : answers to common questions.

## Sommario/riassunto

Year on year, countries across the world continue to see an increase in life expectancy, largely attributed to the impact of modern medicine and disease eradication. There is now increasing evidence that environmental factors such as diet and lifestyle also have a significant role to play. However with this increase in years there often comes an unfortunate rise in chronic morbidity, with the quality of later life severely compromised by ill health. With age being the single greatest risk factor for a large proportion of common medical conditions, this latest report from the British Nutriti
