A Discussion on the Problems of Ecological Culture and Sustainable Development / Liu Sihua -- 11. The Evolution of Civilization and Prospects of an Ecological Culture / Liu Xiaoying -- Bibliography -- Index.
Sommario/riassunto	With China's rapid growth over the past several decades, the

detrimental effects of industrial growth on the environment have become ever more apparent. In this collection of articles from some of China's most distinguished political scientist, economist, and environmentalist, we find the emerging debate on environmentalism unfolding as Chinese try to find their own way. At the core of these concerns is a debate on balancing the needs of economic development with responsibilities to the planet, and the degree to which that responsibility applies to China as a developing country. These articles seek to illustrate broader principles for environmental policies and international support, as well as more specific projects in China that have been tested and those that have failed.
