Index

Sommario/riassunto

Late antiquity is increasingly recognised as a period of important cultural transformation. One of its crucial aspects is the emergence of a new awareness of human individuality. In this book, the authors assess the influence of seminal thinkers, including the Gnostics, Plotinus, and Augustine, but also of cultural and religious practices such as astrology and monasticism, as well as, more generally, the role played by intellectual disciplines such as grammar and Christian theology. The volume serves as a comprehensive introduction to late antique understandings of human individuality.
