

1. Record Nr.	UNINA9910453641003321
Titolo	Nonlinear finite elements for continua and structures // Ted Belytschko [and three others]
Pubbl/distr/stampa	Chichester, England : , : Wiley, , 2014 ©2014
ISBN	1-118-70008-2 1-118-70005-8
Edizione	[Second edition.]
Descrizione fisica	1 online resource (834 p.)
Classificazione	SCI041000
Altri autori (Persone)	BelytschkoTed <1943->
Disciplina	620/.001515355
Soggetti	Finite element method Continuum mechanics Structural analysis (Engineering) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: Preface xi List of Boxes xv 1 Introduction 1 1.1 Nonlinear finite elements in design 1 1.2 Related books and a brief history of nonlinear finite elements 4 1.3 Notation 7 1.4 Mesh descriptions 9 1.5 Classification of partial differential equations 13 1.6 Exercises 18 2 Lagrangian and Eulerian finite elements in one dimension 19 2.1 Introduction 19 2.2 Governing equations for total Lagrangian formulation 20 2.3 Weak form for total Lagrangian formulation 27 2.4 Finite element discretization in total Lagrangian formulation 33 2.5 Element and global matrices 38 2.6 Governing equations for updated Lagrangian formulation 48 2.7 Weak form for updated Lagrangian formulation 51 2.8 Element equations for updated Lagrangian formulation 52 2.9 Governing equations for Eulerian formulation 64 2.10 Weak forms for Eulerian mesh equations 65 2.11 Finite element equations 66 2.12 Solution methods 70 2.13 Summary 72 2.14 Exercises 72 3 Continuum mechanics 75 3.1 Introduction 75 3.2 Deformation and motion 76 3.3 Strain measures 92 3.4 Stress measures 101 3.5 Conservation equations 108 3.6 Lagrangian conservation equations 119 3.7 Polar decomposition and

frame-invariance 125 3.8 Exercises 137 4 Lagrangian meshes 141 4.1
 Introduction 141 4.2 Governing equations 142 4.3 Weak form: principle
 of virtual power 145 4.4 Updated Lagrangian finite element
 discretization 152 4.5 Implementation 162 4.6 Corotational
 formulations 185 4.7 Total Lagrangian formulation 193 4.8 Total
 Lagrangian weak form 196 4.9 Finite element semidiscretization 198
 4.10 Exercise 213 5 Constitutive models 215 5.1 Introduction 215 5.2
 The stress-strain curve 216 5.3 One-dimensional elasticity 221 5.4
 Nonlinear elasticity 225 5.5 One-dimensional plasticity 240 5.6
 Multiaxial plasticity 247 5.7 Hyperelastic-plastic models 264 5.8
 Viscoelasticity 274 5.9 Stress update algorithms 277 5.10 Continuum
 mechanics and constitutive models 294 5.11 Exercises 308 6 Solution
 methods and stability 309 6.1 Introduction 309 6.2 Explicit methods
 310 6.3 Equilibrium solutions and implicit time integration 317 6.4
 Linearization 337 6.5 Stability and continuation methods 353 6.6
 Numerical stability 369 6.7 Material stability 384 6.8 Exercises 392 7
 Arbitrary Lagrangian Eulerian formulations 393 7.1 Introduction 393
 7.2 ALE continuum mechanics 395 7.3 Conservation laws in ALE
 description 402 7.4 ALE governing equations 403 7.5 Weak forms 404
 7.6 Introduction to the Petrov-Galerkin method 408 7.7 Petrov-
 Galerkin formulation of momentum equation 417 7.8 Path-dependent
 materials 420 7.9 Linearization of the discrete equations 432 7.10
 Mesh update equations 435 7.11 Numerical example: an elastic-plastic
 wave propagation problem 442 7.12 Total ALE formulations 443 8
 Element technology 451 8.1 Introduction 451 8.2 Element performance
 453 8.3 Element properties and patch tests 461 8.4 Q4 and volumetric
 locking 469 8.5 Multi-field weak forms and elements 474 8.6 Multi-
 field quadrilaterals 487 8.7 One-point quadrature elements 491 8.8
 Examples 500 8.9 Stability 504 8.10 Exercises 507 9 Beams and shells
 509 9.1 Introduction 509 9.2 Beam theories 511 9.3 Continuum-based
 beam 514 9.4 Analysis of CB beam 524 9.5 Continuum-based shell
 implementation 536 9.6 CB shell theory 550 9.7 Shear and membrane
 locking 555 9.8 Assumed strain elements 560 9.9 One-point
 quadrature elements 563 9.10 Exercises 566 10 Contact-impact 569
 10.1 Introduction 569 10.2 Contact interface equations 570 10.3
 Friction models 580 10.4 Weak forms 585 10.5 Finite element
 discretization 595 10.6 On explicit methods 609 11 XFEM 11.1.
 INTRODUCTION 11.2. PARTITION OF UNITY AND ENRICHMENTS 11.3.
 ONE DIMENSIONAL XFEM 11.4. MULTI-DIMENSION XFEM 11.5. WEAK
 AND STRONG FORMS 11.6. DISCRETE EQUATIONS 11.7. LEVEL SET
 METHOD 11.8. XFEM IMPLEMENTATION STRATEGY 11.9. INTEGRATION
 11.10. AN EXAMPLE OF XFEM SIMULATION 11.11. EXERCISE 12
 Introduction to multiresolution theory 12.1 MOTIVATION: MATERIALS
 ARE STRUCTURED CONTINUA 12.2 BULK DEFORMATION OF
 MICROSTRUCTURED CONTINUA 12.3 GENERALIZING MECHANICS TO
 BULK MICROSTRUCTURED CONTINUA 12.4 MULTISCALE
 MICROSTRUCTURES AND THE MULTIREOLUTION CONTINUUM THEORY
 12.5 GOVERNING EQUATIONS FOR MCT 12.6 CONSTRUCTING MCT
 CONSTITUTIVE RELATIONSHIPS 12.7 BASIC GUIDELINES FOR RVE
 MODELS 12.8 FINITE ELEMENT IMPLEMENTATION OF MCT 12.9
 NUMERICAL EXAMPLE 12.10 FUTURE RESEARCH DIRECTION OF MCT
 MODELING 12.11 EXERCISES 13 Single-crystal plasticity 13.1
 Introduction 13.2 Crystallographic description of cubic and non-cubic
 crystals 13.3 Atomic origins of plasticity and the burgers vector in
 single crystals 13.4 Defining slip planes and directions in general single
 crystals 13.5 Kinematics of single crystal plasticity 13.6 Dislocation
 density evolution 13.7 Stress required for dislocation motion. 13.8
 Stress update in rate-dependent single-crystal plasticity 13.9

Algorithm for rate-dependent dislocation-density based crystal
plasticity 13.10 Numerical example 13.11 Exercises Appendix 1 Voigt
notation 615 Appendix 2 Norms 619 Appendix 3 Element shape
functions 622 Appendix 4 Euler angles from pole figures Appendix 5
Example of dislocation density evolutionary equations Glossary 627
References 631 Index 641 .

Sommario/riassunto

"Focuses on the formulation and solution of the discrete equations for
various classes of problems encountered in the application of the finite
element method to solid and structural mechanics"--
