Sommario/riassunto	How do converts to a religion come to feel an attachment to it? The New Muslims of Post-Conquest Iran answers this important question for Iran by focusing on the role of memory and its revision and erasure in the ninth to eleventh centuries. During this period, the descendants of the Persian imperial, religious and historiographical traditions not only wrote themselves into starkly different early Arabic and Islamic accounts of the past but also systematically suppressed much knowledge about pre-Islamic history. The result was both a new

'Persian' ethnic identity and the pairing of Islam with other loyalties and affiliations, including family, locale and sect. This pioneering study examines revisions to memory in a wide range of cases, from Iran's imperial and administrative heritage to the Prophet Muhammad's stalwart Persian companion, Salman al-Farisi, and to memory of Iranian scholars, soldiers and rulers in the mid-seventh century.

Sommario/riassunto

Diabetes and Kidney Disease reviews the most up-to-date research on diabetic nephropathy, the current understanding of its pathophysiology, renal structural alterations and clinical features, and summarizes recent evidence-based clinical treatment modalities for the prevention and management of diabetic kidney disease. General clinical aspects are covered, as well as an overview to the novel approaches being designed by leading researchers in the field. A convenient compendium for physicians involved in the care of diabetic patients with varying degrees of kidney involvement, Diabetes and Kidney Disease is also a handy resource for medical residents and students interested in the current status and future approaches to reducing the burden of diabetes and diabetic kidney disease.
