

1. Record Nr.	UNINA9910453693303321
Titolo	Assessing Microbial Safety of Drinking Water Improving Approaches and Methods // Edited by Al Dufour and five others
Pubbl/distr/stampa	London, : IWA Publishing, 2003
ISBN	1-78040-587-1
Descrizione fisica	1 online resource (298 pages)
Collana	WHO drinking water quality series
Altri autori (Persone)	SnozziMario KosterWolfgang
Soggetti	Drinking water - Contamination Drinking water - Health aspects Drinking water - Microbiology Drinking water - Standards Water quality Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Sommario/riassunto	Contaminated drinking water contributes to disease in developing and developed countries worldwide. This book, which is the outcome of a shared WHO-OECD initiative since 1998, provides a state-of-the-art review on approaches and methods used in assessing the microbial safety of drinking-water. It supports a framework for water and offers guidance on the selection and use of available indicators alongside operational monitoring to meet specific information needs. It looks at potential applications of new technologies and emerging methods.
