

1. Record Nr.	UNINA9910453699403321
Autore	Pond Kathy
Titolo	Water recreation and disease : plausibility of associated infections : acute effects, sequelae and mortality // Kathy Pond
Pubbl/distr/stampa	London, : IWA Publishing, 2005
ISBN	1-78040-582-0
Descrizione fisica	1 online resource (262 pages)
Collana	Emerging issues in water and infectious disease series
Soggetti	Outdoor recreation Communicable diseases - Transmission Waterborne infection Water - Microbiology Swimming pools - Health aspects Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Sommario/riassunto	Recreational users of water may be at risk of serious and potentially fatal diseases. In addition to disease with severe primary outcomes (e. g. typhoid, leptospirosis), a number of infections may lead to sequelae with serious consequences. Susceptible populations, including people with reduced immune function or lack of immunity to locally endemic diseases (tourists, for example), are at higher risk of contracting severe illnesses.
