	Sommario/riassunto	This edited collection focuses on research into youth, 'mixed race', identities, intersections of 'race' and ethnicity, and - crucially - has extended the focus from visible 'ethnic minorities' to the theorization and interrogation of whiteness. A key feature of the book is its engagement with a range of methodological approaches to examining the significance of race including ethnography, visual methodologies and historical analysis.

	Sommario/riassunto	This textbook introduces Python and its programming through a multitude of clearly presented examples and worked-out exercises. Based on a course taught to undergraduate students of mathematics, science, engineering and finance, the book includes chapters on handling data, calculus, solving equations, and graphics, thus covering all of the basic topics in Python. Each section starts with a description of a new topic and some basic examples. The author then demonstrates the new concepts through worked out exercises. The intention is to enable the reader to learn from the codes, thus avoiding lengthy, exhausting explanations. With its strong focus on programming and problem solving, and an emphasis on numerical problems that do not require advanced mathematics, this textbook is also ideal for self-study, for instance for researchers who wish to use
