Sommario/riassunto

This volume contains papers from the third symposium held by the University of Tel Aviv, Israel, and the Ruhr University, Bochum, Germany, with the aim of furthering dialogue between Jewish and Christian biblical scholars. The papers examine the ways in which political issues and events are reflected in the Bible and in the postbiblical literature, the term 'theopolitics' expressing the conviction of both communities that the politics of human life have always been and continue to be subject to the rule and providence of God. The hope of the symposium is that through examination of the ways in

Sommario/riassunto

"The subject of the exact renormalization group started from pioneering work by Wegner and Houghton in the early seventies and, a decade later, by Polchinski, who formulated the Wilson renormalization group for field theory. In the past decade considerable progress has been made in this field, which includes the development of alternative formulations of the approach and of powerful techniques for solving

the exact renormalization group equations, as well as widening of the scope of the exact renormalization group method to include fermions and gauge fields. In particular, two very recent results, namely the manifestly gauge-invariant formulation of the exact renormalization group equation and the proof of the c-theorem in four dimensions, are presented in this volume."--Publisher's website.
