Controlling Technical Workers in Alternative Work Arrangements: Rethinking the Work Contract; 12. Net-Working for a Living: Irish Software Developers in the Global Workplace; About the Contributors

Sommario/riassunto	Two broad developments reshaped work at the end of the twentieth century. The first was the implosion of the Soviet Union and the worldwide triumph of market capitalism. The second was the increasing use of computer-based production technologies and management command-and-control systems. How do we make sense of these important developments. The editors have assembled a collection of provocative, original essays on work and workplaces throughout the world that challenge the current celebration of globalization and new technologies. Building on labor process analysis, individual
