Sommario/riassunto This edited volume brings together fourteen original contributions to the on-going debate about what is possible in contract-induced language change. The authors present a number of new vistas on language contact which represent new developments in the field. In the first part of the volume, the focus is on methodology and theory. Thomas Stotz defines the study of Romancisation processes as a very promising laboratory for language-contact oriented research and theoretical work based thereon. The reader is informed about the large scale projects on loanword typology in the contribution by Martin Haspelmath and on contact-induced grammatical change conducted by Jeanette Sakel and Yaron Matras. Christel Stotz reviews processes of gender-assignment to loan nouns in German-based varieties. The typology of loan verbs is the topic of the contribution by Søren Wichmann and Jan Wohlgemuth. In the articles by Wolfgang Wildgen and Klaus Zimmermann, two radically new approaches to the theory of language contact are put forward: a dynamic model and a constructivism-based theory, respectively. The second part of the volume is dedicated to more empirically oriented studies which look into language-contact constellations with a Romance donor language and a non-European recipient language. Spanish-Amerindian (Guaraní, Otomí, Quichua) contacts are investigated in the comparative study by Dik Bakker, Jorge Gómez-Rendón and Ewald Hekking. Peter Bakker and Robert A. Papen discuss the influence exerted by French on the indigenous languages ofCanada. The extent of the Portuguese impact on the Amazonian language Kulina is studied by Stefan Dienst. John Holm looks at the validity of the hypothesis that bound morphology normally falls victim to Creolization processes and draws his evidence mainly from Portuguese-based Creoles. For Austronesia, borrowings and calques from French still are an understudied phenomenon. Claire Moyse-Faurie's contribution to this topic is thus a pioneer's work. Similarly, Françoise Rose and	the on-going debate about what is possible in contact-induced language change.
