Sommario/riassunto	Over the past three years, pregnancy related mood disorders have become the focus of health care advocates and legislators alike with subsequent reflection in nationwide media. Statistics on the prevalence of perinatal mood disorders suggest that up to 20% of women experience diagnosable pregnancy related mood disorders. The growing recognition of these common disorders, coupled with an increasing knowledge base about the dire consequences of untreated maternal depression, has propelled this issue to the fore of national public health priorities. This increasing awareness has also resulted in
