Sommario/riassunto	The aim of the book is to analyse the factors that have influenced wind power outcomes in a range of countries which have featured significant

wind power deployment programmes. A central theme is the relationship between patterns of ownership and the outcomes. These flow from different social environments, but they are associated with different types of planning outcome and deployment rates. Grass roots ownership is more widespread than is commonly thought, although it is not a panacea for effective wind power programmes. Financial policies used to promote wind power also have important inf
