Sommario/riassunto	Why does the accent jump back and forth in Russian words like <i>golová</i> 'head', acc. <i>gólovu</i> , gen. <i>golový</i> , dat. <i>golové</i> etc.? How come we find similar alternations in other Slavic languages and in a Baltic language like Lithuanian? The quest for the origin of the so-called "mobile accent paradigms" of Baltic and Slavic leads the reader through other Indo-European language branches such as Indo-Iranian, Greek and Germanic, all of which are relevant to the reconstruction of the Proto-Indo-European accentuation system. After the examination of the evidence for the reconstruction of the Proto-Indo-European accentuation system, focus is moved to the Baltic and Slavic accentuation systems and their relationship to each other and to Proto-Indo-European. A comprehensive history of research and numerous bibliographical references to earlier pieces of scholarship throughout the book make it a useful tool for anybody who is interested in Balto-Slavic and Indo-European accentology. Written in a simple style and constantly aiming at presenting old and new opinions on the various

problems, the volume may serve as an introduction to this complicated field.
