Nota di contenuto	Why Focusing on Urban Climate Change Resilience in Southeast Asia Is Relevant and Urgent -- Part 1: Understanding Vulnerability: Neighbourhoods, Cities, and Nations Beyond -- Bridging Systems and People-centred Approaches in Urban Vulnerability Research: Insights for Resilience from Dawei, Myanmar.-Water Access and Resilience to Climate-induced Droughts in the Thai Secondary City of Khon Kaen: Unequal and Unjust Vulnerability -- Migrating Toward Vulnerabilities: The Impacts of Structural Violence on Myanmar Migrants in Phuket, Thailand.
Sommario/riassunto	This volume explores how climate change impacts interact with poverty and vulnerability to increase the risk for urban residents in Southeast Asia. It combines knowledge from both academic literature and action

research to explore the creation of climate resilient urban governance that is both inclusive and equitable. The book contains contributions from researchers in different cities in Southeast Asia involved with the major research project Building Urban Climate Change Resilience in Southeast Asian Cities (UCRSEA). The authors respond to three urgent questions: How does climate change interact with poverty and vulnerability to create risk for urban residents in Southeast Asia? What does knowledge, from both academic literature and action research, tell us about creating climate resilient urban governance that is both inclusive and equitable? How can we strengthen the agency of individuals, groups and institutions to improve economic, physical and social well-being in urban areas, particularly in response to climate change? The book hopes to answer to current challenges posed by climate change. In the volume, the authors discuss how the agency of individuals, groups and institutions can be strengthened to improve economic, physical and social well-being in urban areas, particularly in response to climate change.
