| Sommario/riassunto      | This long-awaited two-volume book examines how the interplay of ideas and actions applied to environmental problems has laid the foundations for global environmental management. It looks at how ideas, interests, and institutions affect management practice; how management capabilities in other areas affect the ability to deal with specific environmental issues; and how learning affects society's approach to the global environment. The book focuses on efforts to deal with climate change, ozone depletion, and acid rain from 1957 (The International Geophysical Year) through 1992 (the UN Conference |

on Environment and Development). The settings include Canada, Germany, Hungary, Japan, Mexico, the Netherlands, the former Soviet Union, the United Kingdom, the United States, and international environmental organizations. Topics include problem framing, agenda setting, issue attention, risk assessment, monitoring, option assessment, goal and strategy formulation, implementation, and evaluation. Volume 1 provides an overview of the project, of global environmental management in general, and of the three central environmental issues studied; it also contains the individual country studies. Volume 2 contains the management function studies and the book's conclusion. Authors in the set include Jeannine Cavender-Bares, William C. Clark, Ellis Cowling, Nancy M. Dickson, Gerda Dinkelman, Rodney Dobell, Renate Ell, Adam Fenech, Alexander Ginzburg, Elena Goncharova, Peter Haas, Eva Hízsnyik, Michael Huber, Peter Hughes, Jill Jager, Marc Levy, Angela Liberatore, Diana Liverman, Justin Longo, David McCabe, Donald Munton, Elena Nikitina, Karen O'Brien, Edward Parson, Vladimir Pisarev, Ruud Pleune, Miranda Schreurs, Simon Shackley, Peter Simmons, Heather Smith, Vassily Sokolov, Ferenc L.
