10 User requirements and responsible reconstruction;
11 Space and place after natural disasters and forced displacement;
12 The importance of institutional and community resilience in post-disaster reconstruction;
13 From complexity to strategic planning for sustainable reconstruction;
References; Editors and contributors; Index

Sommario/riassunto

Disasters are not natural. Natural events such as earthquakes, floods, hurricanes, etc. become disasters because of the fragile relations that exist between the natural, human and built environments. Sadly, major disasters will always occur in towns and cities in the developing world where resources are limited, people are vulnerable and needs are particularly great. The prevailing state of emergency challenges thoughtful and sustainable planning and construction. Yet it is possible, in theory and in practice, to construct them in a way that provides a sustainable environment and improved c
