Sommario/riassunto	In 1900 only a handful of drugs (morphine, quinine, aspirin, etc) had genuine efficacy but had little value for bacterial or viral infections or cancer. These conditions were usually untreatable. Now there are literally thousands of drugs which offer cures or greatly extended life-spans for those with life-threatening conditions. Life Saving Drugs: the Elusive Magic Bullet describes the discovery and development of antibacterial, anti-viral and anti-cancer drugs. The book highlights the colourful characters behind the inventions and the huge improvements in quality of life and life-expectancy
