### Sommario/riassunto

This book examines how to achieve improved outcomes for infants growing up in situations of risk due to parents' mental health and other related psychosocial circumstances that may impair parental functioning. These include migration, substance abuse, and infant hospitalisation. The authors examine the effects of adverse life circumstances on infant and family and, in most cases, also describe assessments and interventions. Several chapters have been written by people personally affected by mental illness, or mental illness of a family member.

The Professions Retreat -- Conclusion: The New Coerced Sterilization Movement -- Appendix. Bibliography of Twentieth-Century American Biology Textbooks -- Notes -- Bibliography -- Index -- About the Author
Sommario/riassunto	Most closely associated with the Nazis and World War II atrocities, eugenics is sometimes described as a government-orchestrated breeding program, other times as a pseudo-science, and often as the first step leading to genocide. Less frequently it is recognized as a movement having links to the United States. But eugenics does have a history in this country, and Mark A. Largent tells that story by exploring one of its most disturbing aspects, the compulsory sterilization of more than 64,000 Americans. The book begins in the mid-nineteenth century, when American medical doctors began advocating the sterilization of citizens they deemed degenerate. By the turn of the twentieth century, physicians, biologists, and social scientists championed the cause, and lawmakers in two-thirds of the United

States enacted laws that required the sterilization of various criminals, mental health patients, epileptics, and syphilitics. The movement lasted well into the latter half of the century, and Largent shows how even today the sentiments that motivated coerced sterilization persist as certain public figures advocate compulsory birth control—such as progesterone shots for male criminals or female welfare recipients—based on the same assumptions and motivations that had brought about thousands of coerced sterilizations decades ago.
