

1. Record Nr.	UNINA9910455483803321
Autore	Luker Kristin
Titolo	Abortion and the politics of motherhood [[electronic resource] /] / Kristin Luker
Pubbl/distr/stampa	Berkeley, : University of California Press, c1984
ISBN	1-282-75855-1 9786612758553 0-520-90792-2
Descrizione fisica	1 online resource (342 p.)
Collana	California series on social choice and political economy
Disciplina	363.4/6/0973
Soggetti	Abortion - United States Abortion - Political aspects - United States Pro-life movement - United States Motherhood - Moral and ethical aspects Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 291-309) and index.
Nota di contenuto	Frontmatter -- Contents -- Foreword -- Preface -- Acknowledgments -- 1. Introduction -- 2. Medicine and Morality in the Nineteenth Century -- 3. The Century of Silence -- 4. Abortion Reform: The Professionals' Dilemma -- 5. Women and the Right to Abortion -- 6. The Emergence of the Right-to-Life Movement -- 7. World Views of the Activists -- 8. Motherhood and Morality in America -- 9. The Future of the Debate -- Appendix 1: Methodology -- Appendix 2: Tables -- Notes -- Bibliography -- Index
Sommario/riassunto	In this important study of the abortion controversy in the United States, Kristin Luker examines the issues, people, and beliefs on both sides of the abortion conflict. She draws data from twenty years of public documents and newspaper accounts, as well as over two hundred interviews with both pro-life and pro-choice activists. She argues that moral positions on abortion are intimately tied to views on sexual behavior, the care of children, family life, technology, and the importance of the individual.

Titolo	Visible Light Active Photocatalysts for Environmental Remediation and Organic Synthesis
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (176 p.)
Soggetti	History of engineering and technology Materials science Technology: general issues
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In recent years, the formulation of innovative photocatalysts activated by visible or solar light has been attracting increasing attention because of their notable potential for environmental remediation and use in organic synthesis reactions. Generally, the strategies for the development of visible-light-active photocatalysts are mainly focused on enhancing degradation efficiency (in the case of environmental remediation) or increasing selectivity toward the desired product (in the case of organic synthesis). These goals can be achieved by doping the semiconductor lattice with metal and/or non-metal elements in order to reduce band gap energy, thereby providing the semiconductor with the ability to absorb light at a wavelength higher than the UV range. Other interesting options are the formulation of different types of heterojunctions (to increase visible absorption properties and to reduce the recombination rate of charge carriers) and the development of innovative catalytic materials with semiconducting properties. This reprint is focused on visible-light-active photocatalysts for environmental remediation and organic synthesis, featuring the state of the art as well as advances in this field.
