Sommario/riassunto

Best-known for his sweeping narrative Histories of His Own Times and for his portrait museum on Lake Como, the Italian bishop and historian Paolo Giovio (1486-1552) had contact with many of the protagonists of the great events he so vividly described--the wars of France, Germany, and Spain, and the sack of Rome. He used the information he gleaned from his contacts to carry on an extensive correspondence that became a kind of proto-journalism. With his interests in history, literature, geography, exploration, medicine, and the arts, this man reflects almost the entire spectrum of High Renaissance civilization. In a biography surveying both Giovio's life and his works, T. C. Price Zimmermann examines the historian as a figure formed by fifteenth-century humanism who was caught in the changing temper of the Counter Reformation. Giovio's Histories remained a widely used account of the wars of Italy for nearly two hundred and fifty years, although his objectivity was often questioned owing to the patronage he received. Following Burckhardt, who began to restore Giovio's reputation more than a century ago, Zimmermann reveals a conscientious, independent-minded historian and an astute commentator on the entire Mediterranean world, the first to integrate the contemporary history of the Muslim nations with that of Europe, east and west. The book also stresses the important contributions Giovio made to the ethos of the Renaissance through his biographies and famous portrait museum, both tributes to the emerging sense of individual human personality.

Nota di contenuto	Introduction -- Mathematical Preliminaries -- PDE Modeling for Flexible Manipulator -- Boundary Control Using Singular Perturbation Approach -- Robust boundary control of an axially moving system -- Adaptive boundary control of an axially moving system with high acceleration/deceleration -- Adaptive boundary control of an axially moving belt system with high acceleration/deceleration -- Boundary control of an axially moving accelerated/decelerated -- Stabilization of an axially moving accelerated/decelerated system -- Adaptive output feedback boundary control -- Vibration control and boundary tension constraint of an axially moving string system -- Boundary Control for an Axially Moving System With Input Restriction Based on Disturbance Observers -- Adaptive Neural Network Vibration Control for an Output-Tension-Constrained Axially Moving Belt System With Input Nonlinearity -- Conclusion.
Sommario/riassunto	The main objectives of the book are to introduce the design method of boundary control strategies for the axially moving structures to reduce their vibration. This book provides the reader with a thorough grounding in the boundary controller design. Our goal is to provide advanced boundary controller design methods and their stability analysis methods and offer simulation examples and MATLAB programs for each boundary control algorithm. For each chapter, several

engineering application examples are given and the contents of each chapter in this book are independent, so that readers can just read their own needs. In this book, all the control algorithms and their programs are described separately and classified by the chapter name, which can be run successfully in MATLAB. The book can benefit researchers, engineers, and graduate students in the fields of PDE modeling and boundary vibration control of flexible structures.

Sommario/riassunto

Proposes a new model of contractualism based on an interpersonal, deliberative conception of practical reason which answers the twin demands of moral accuracy and explanatory adequacy.
