

1. Record Nr.	UNINA9910455544103321
Titolo	Quantum aspects of life [[electronic resource] /] / editors, Derek Abbott, Paul C.W. Davies, Arun K. Pati ; foreword by Roger Penrose
Pubbl/distr/stampa	London, : Imperial College Press Hackensack, NJ ; ; London, : Distributed by World Scientific, c2008
ISBN	1-84816-255-3
Descrizione fisica	1 online resource (468 p.)
Altri autori (Persone)	AbbottDerek <1960-> DaviesP. C. W PatiArun K
Disciplina	576.8/3
Soggetti	Quantum biochemistry Life - Origin Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface; Foreword; Acknowledgments; Contents; Part 1: Emergence and Complexity; 1. A Quantum Origin of Life? Paul C. W. Davies; 1.1. Chemistry and Information; 1.2. Q-life; 1.3. The Problem of Decoherence; 1.4. Life as the "Solution" of a Quantum Search Algorithm; 1.5. Quantum Choreography; Acknowledgements; References; 2. Quantum Mechanics and Emergence Seth Lloyd; 2.1. Bits; 2.2. Coin Flips; 2.3. The Computational Universe; 2.4. Generating Complexity; 2.5. A Human Perspective; 2.6. A Quantum Perspective; References; Part 2: Quantum Mechanisms in Biology 3. Quantum Coherence and the Search for the First Replicator Jim Al-Khalili and John Joe McFadden 3.1. When did Life Start?; 3.2. Where did Life Start?; 3.3. Where did the Precursors Come From?; 3.4. What was the Nature of the First Self-replicator?; 3.5. The RNA World Hypothesis; 3.6. A Quantum Mechanical Origin of Life; 3.6.1. The dynamic combinatorial library; 3.6.2. The two-potential model; 3.6.3. Decoherence; 3.6.4. Replication as measurement; 3.6.5. Avoiding decoherence; 3.7. Summary; References 4. Ultrafast Quantum Dynamics in Photosynthesis Alexandra Olaya

Castro, Francesca Fassioli Olsen, Chiu Fan Lee, and Neil F. Johnson 4.1. Introduction; 4.2. A Coherent Photosynthetic Unit (CPSU); 4.3. Toy Model: Interacting Qubits with a Spin-star Configuration; 4.4. A More Detailed Model: Photosynthetic Unit of Purple Bacteria; 4.5. Experimental Considerations; 4.6. Outlook; References; 5. Modelling Quantum Decoherence in Biomolecules Jacques Bothma, Joel Gilmore, and Ross H. McKenzie; 5.1. Introduction; 5.2. Time and Energy Scales; 5.3. Models for Quantum Baths and Decoherence 5.3.1. The spin-boson model 5.3.1.1. Independent boson model; 5.3.2. Caldeira-Leggett Hamiltonian; 5.3.3. The spectral density; 5.4. The Spectral Density for the Different Continuum Models of the Environment; 5.5. Obtaining the Spectral Density from Experimental Data; 5.6. Analytical Solution for the Time Evolution of the Density Matrix; 5.7. Nuclear Quantum Tunnelling in Enzymes and the Crossover Temperature; 5.8. Summary; References; Part 3: The Biological Evidence; 6. Molecular Evolution: A Role for Quantum Mechanics in the Dynamics of Molecular Machines that Read and Write DNA Anita Goel 6.1. Introduction 6.2. Background; 6.3. Approach; 6.3.1. The information processing power of a molecular motor; 6.3.2. Estimation of decoherence times of the motor-DNA complex; 6.3.3. Implications and discussion; References; 7. Memory Depends on the Cytoskeleton, but is it Quantum? Andreas Mershin and Dimitri V. Nanopoulos; 7.1. Introduction; 7.2. Motivation behind Connecting Quantum Physics to the Brain; 7.3. Three Scales of Testing for Quantum Phenomena in Consciousness; 7.4. Testing the QCI at the 10 nm-10 m Scale 7.5. Testing for Quantum Effects in Biological Matter Amplified from the 0.1 nm to the 10 nm Scale and Beyond

Sommario/riassunto

This book presents the hotly debated question of whether quantum mechanics plays a non-trivial role in biology. In a timely way, it sets out a distinct quantum biology agenda. The burgeoning fields of nanotechnology, biotechnology, quantum technology, and quantum information processing are now strongly converging. The acronym BINS, for Bio-Info-Nano-Systems, has been coined to describe the synergetic interface of these several disciplines. The living cell is an information replicating and processing system that is replete with naturally-evolved nanomachines, which at some level require a quant
