	Sommario/riassunto	Comparing both AS and non-AS partners' viewpoints, this book frankly examines the aspects of relationships that are often complicated by the disorder. With all findings illustrated with case examples taken from

interviews conducted with couples, the author tackles issues such as attraction, trust, communication, sex and intimacy, and parenting.

	Sommario/riassunto	This textbook provides a wide-ranging introduction to the use and theory of linear models for analyzing data. The author's emphasis is on providing a unified treatment of linear models, including analysis of variance models and regression models, based on projections, orthogonality, and other vector space ideas. Every chapter comes with numerous exercises and examples that make it ideal for a graduate-level course. All of the standard topics are covered in depth: estimation including biased and Bayesian estimation, significance testing, ANOVA, multiple comparisons, regression analysis, and experimental design models. In addition, the book covers topics that are not usually treated at this level, but which are important in their own right: best linear and

best linear unbiased prediction, split plot models, balanced incomplete block designs, testing for lack of fit, testing for independence, models with singular covariance matrices, diagnostics, collinearity, and variable selection. This new edition includes new sections on alternatives to least squares estimation and the variance-bias tradeoff, expanded discussion of variable selection, new material on characterizing the interaction space in an unbalanced two-way ANOVA, Freedman's critique of the sandwich estimator, and much more.

	Sommario/riassunto	This classic text retains the superb scholarship of the first edition in a thoroughly revised and accessibly written new edition. With both new and updated essays by distinguished American and Canadian authors, the book provides a comprehensive historical overview of the formation and growth of North American regions from European exploration and colonization to the second half of the twentieth century. Collectively the contributors explore the key themes of acquisition of geographical
