## Sommario/riassunto

Life writing is the most flexible and open term available for autobiographical fragments and other kinds of autobiographical-seeming texts. It includes the conventional genres of autobiography, journals, memoirs, letters, testimonies, and metafiction, and in earlier definitions it included biography. It is a way of seeing literary and other texts that neither objectifies nor subjectifies the nature of a particular cultural truth. Marlene Kadar has brought together an interdisciplinary and comparative collection of critical and theoretical essays by diverse Canadian scholars, most of whom are women engaged in larger projects in life writing or in archival research. In the more practical pieces the author has discerned a pattern in autobiographical text, or subtext, that has come to revolutionize the life, the critic's approach, or the discipline itself. In the theoretical pieces, authors make cogent proposals to view a body of literature in a new way, often in order to incorporate feminist visions or humanistic interpretations. The contributors represent a broad range of scholars from disciplines within the humanities and beyond. Collectively they provide an impressive overview of a growing field of scholarship.

SINGULARITIES, KNOTS AND BRIESKORN VARIETIES -- APPENDIX. GENERALIZED POLYNOMIALS AND A STATE MODEL FOR THE JONES POLYNOMIAL -- KNOT TABLES AND THE L-POLYNOMIAL -- REFERENCES
Sommario/riassunto	On Knots is a journey through the theory of knots, starting from the simplest combinatorial ideas--ideas arising from the representation of weaving patterns. From this beginning, topological invariants are constructed directly: first linking numbers, then the Conway polynomial and skein theory. This paves the way for later discussion of the recently discovered Jones and generalized polynomials. The central chapter, Chapter Six, is a miscellany of topics and recreations. Here the reader

will find the quaternions and the belt trick, a devilish rope trick, Alhambra mosaics, Fibonacci trees, the topology of DNA, and the author's geometric interpretation of the generalized Jones Polynomial. Then come branched covering spaces, the Alexander polynomial, signature theorems, the work of Casson and Gordon on slice knots, and a chapter on knots and algebraic singularities. The book concludes with an appendix about generalized polynomials.
