Disciplina	304.6/0942/09034
Soggetti	Demography - England Demography - Wales
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references (p. 411-439) and index.
Nota di contenuto	Preliminaries; Contents; List of Figures; List of Tables; Preface; 1: Bricks without straw, bones without flesh; 2: Vital statistics; 3: Whatever happened to the preventive check?; 4: Family limitation; 5: The laws of vitality; 6: Mortality by occupation and social group; 7: The origins of the secular decline of childhood mortality; 8: Places and causes; 9: The demographic consequences of urbanisation; 10: The transformation of the English and other demographic regimes; 11: Conclusions and unresolved conundrums; Bibliography; Index Cambridge Studies in Population, Economy and Society in Past Time
Sommario/riassunto	The Demography of Victorian England and Wales uses the full range of nineteenth-century civil registration material to describe in detail for the first time the changing population history of England and Wales between 1837 and 1914. Its principal focus is the great demographic revolution which occurred during those years, especially the secular decline of fertility and the origins of the modern rise in life expectancy.

But Robert Woods also considers the variable quality of the Victorian registration system; the changing role of what Robert Malthus termed the preventive check; variations in occupational mortality and the development of the twentieth-century class mortality gradient; and the effects of urbanisation associated with the significance of distinctive disease environments. The volume also illustrates the fundamental importance of geographical variations between urban and rural areas. This invaluable reference tool is lavishly illustrated with numerous tables, figures and maps, many of which are reproduced in full colour.
