

1. Record Nr.	UNINA9910456236903321
Titolo	Enabling applications for grid computing with Globus [[electronic resource] /] / [Bart Jacob ... et al.]
Pubbl/distr/stampa	[United States?], : IBM, c2003
Edizione	[1st ed.]
Descrizione fisica	xvi, 378 p. : ill
Collana	Redbooks
Altri autori (Persone)	JacobBart
Disciplina	004.3/6
Soggetti	Computational grids (Computer systems) Application software - Development IBM software Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"June 2003." "SG24-6936-00."
Nota di bibliografia	Includes bibliographical references (p. 365-372) and index.
Sommario/riassunto	This IBM Redbook, a follow-on to Introduction to Grid Computing with Globus, SG24-6895, discusses the issues and considerations for enabling an application to run in a grid environment. Programming examples are provided based on the Globus Toolkit V2.2. The first part of this publication addresses various considerations related to grid-enabling an application, from the perspective of the infrastructure, the application, and the data requirements. The second part of this publication provides many programming examples in C/C++ and Java to help solidify the concepts of grid computing and the types of programming tasks that must be handled when developing an application intended to run in a grid environment.
