Sommario/riassunto

Contemporary versions of evil demonise modern "fascists", "totalitarian threats", and "Hitlers". As if not obscure enough, fascist evil has been equivocally linked with perversion. This book reveals that both fascism and perversion implicate the non-symbolisable kernel in politics, which becomes the source of their mystification. It argues that the fascist does not take the same discursive position as the pervert does, regarding this symbolic gap. The author develops a new rhetoric, de-pathologised and de-ideologised, regarding the structure of the so-called pervert, introducing new vocabularies and directions for psychoanalytic research that further distance the pervert, or whom he calls the "extra-ordinary subject", from fascist politics and, instead, exposes his diachronic "fascist" isolation from the social edifice. This reveals the fruitful alternatives that can stem from a "return to Freud cum Lacan", which supports a flexible on-going reformulation of psychoanalytic knowledge.

Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	The topological fundamental group of a smooth complex algebraic variety is poorly understood. One way to approach it is to consider its complex linear representations modulo conjugation, that is, its complex local systems. A fundamental problem is then to single out the complex points of such moduli spaces which correspond to geometric systems, and more generally to identify geometric subloci of the moduli space of local systems with special arithmetic properties. Deep conjectures have been made in relation to these problems. This book studies some consequences of these conjectures, notably density, integrality and crystallinity properties of some special loci. This monograph provides a unique compelling and concise overview of an active area of research and is useful to students looking to get into this area. It is of interest to a wide range of researchers and is a useful reference for newcomers and experts alike.
