Note generali	"A Gower book"--cover. First published 2011 by Gower Publishing.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Contents; List of Figures; List of Tables; Preface; 1 Managing Pharmaceutical Projects Strategically; 2 Linking Pharmaceutical Projects with Business Strategy; 3 Defining Pharmaceutical Projects; 4 Developing Pharmaceutical Project Strategy and Plans; 5 Evaluating Pharmaceutical Projects; 6 Pharmaceutical Project Mobilisation, Control and Learning; 7 Influencing People and Behaviour; 8 Project Management Checklists and Cost-management Project Case Study; 9 Conclusion; Glossary of Key Project Management Definitions; Bibliography; Index
Sommario/riassunto	Written firmly from the perspective of the pharmaceutical industry, Laura Brown and Tony Grundy' offer a guide to the tools and techniques of project management. They cover both the technical and human aspects of project management to provide clinical research, drug development and quality assurance managers or directors with a

must-have reference.

Sommario/riassunto

"This book addresses the need for a comprehensive book on the design, synthesis, and characterization of synthetic carbohydrate-based polymeric materials along with their biological applications. The first two chapters cover the synthesis and self-assembly of glycopolymers and different techniques for creating these synthetic polymers. Subsequent chapters account for the preparation of block copolymers, branched glycopolymers, glycosurfaces, glycodendrimers, cationic glycopolymers, bioconjugates, glyconanoparticles and hydrogels. While these chapters comprehensively review the synthetic and characterization methods of those carbohydrate-based materials, their biological applications are discussed in detail."--Provided by publisher.

Sommario/riassunto	Closing a gap in the literature, this comprehensive book presents such carbohydrate tools as chiral auxiliaries, reagents, complex ligands and organocatalysts, together with details of their preparation, as well as their successful application in stereoselective synthesis. It covers the synthesis of carbohydrate tools, and discusses examples for a broad range of different reactions compared to those obtained with the best conventional methods. An indispensable source for every organic chemist.
