Nota di contenuto	Cover; Copy Right; ACKNOWLEDGEMENTS; SERIES FOREWORD; ABOUT THE EDITORS AND CONTRIBUTORS; Introduction; CHAPTER ONE: Embodied psychoanalysis? Or, on the confluence of psychodynamic theory and developmental science; Commentary; CHAPTER TWO: The social construction of the subjective self: the role of affect-mirroring, markedness, and ostensive communication in self-development; Commentary; CHAPTER THREE: Primary parental preoccupation: revisited; Commentary; CHAPTER FOUR: Exploring the neurobiology of attachment; Commentary; CHAPTER FIVE: The Interpretation of Dreams and the neurosciences CommentaryCHAPTER SIX: In the best interestsof the late-placed child: a report from the Attachment Representations and Adoption Outcome

study; Commentary; CHAPTER SEVEN: Child psychotherapy research: issues and opportunities; Commentary; Effectiveness of psychotherapy in the "real world": the case of youth depression; Commentary; CHAPTER NINE: Controlling the random, or who controls whom in the randomized controlled trial?; Commentary; CHAPTER TEN: Psychoanalytic responses to violent trauma: the Child Development... Community Policing partnership; Commentary CHAPTER ELEVEN: Multi-contextual multiple family therapy; Commentary; CHAPTER TWELVE: Towards a typology of late adolescent suicide; Commentary; REFERENCES

Sommario/riassunto

As a discipline, psychoanalysis began at the interface of mind and brain and has always been about those most basic questions of biology and psychology: loving, hating, what brings us together as lovers, parents, and friends and what pulls us apart in conflict and hatred. These are the enduring mysteries of life and especially of early development-how young children learn the language of the social world with its intertwined biological, genetic, and experiential roots and how infants translate thousands of intimate moments with their parents into a genuine, intuitive, emotional connection to other persons. Basic developmental neuroscience and psychology has also of late turned to these basic questions of affiliation: of how it is that as humans our most basic concerns are about finding, establishing, preserving, and mourning our relationships. These areas in broad strokes are the substance of mind and brain, and the last decade has brought much new science to the biology of attachment, love, and aggression.
