Sommario/riassunto	Pain in later life is both quite common and disabling, and it differs significantly in terms of its aetiology, diagnosis and treatment from pain in the general adult population. Older people often have complicated co-morbidities, have a high prevalence of mental health

problems (e.g., anxiety, cognitive impairment, and depression) and respond to treatment in different ways compared to younger people. Their specific needs are rarely discussed specifically in more general texts. Part of the "Oxford Pain Management Library," this pocketbook will serve as a concise companion for healthcare profes
