	Sommario/riassunto	The war in the Middle East is marked by a lack of cultural knowledge on the part of the western forces, and this book deals with another, widely ignored element of Islam-the role of dreams in everyday life. The practice of using night dreams to make important life decisions can be traced to Middle Eastern dream traditions and practices that preceded

the emergence of Islam. In this study, the author explores some key aspects of Islamic dream theory and interpretation as well as the role and significance of night dreams for contemporary Muslims. In his analysis of the Islamic debates surrounding

Sommario/riassunto | "This volume brings together seven empirical studies about aptitude-treatment interactions (ATI), i.e., about how (second language) learners with different aptitudes match or don't match with different educational treatments; and aptitude-testing interactions, i.e., about how learners with different aptitudes perform better or worse depending on the way their knowledge and skills are tested. The authors are all established researchers or rising stars in the field of second language acquisition (SLA), who believe that little can be said about the effectiveness of teaching and testing methods or techniques without taking individual differences into account. Many of the studies corroborate in SLA what has become a central finding in the psychological and educational research about ATI: the more a method puts the burden of information processing on the student, the bigger the role of the corresponding aptitudes. The kinds of findings documented in this volume contribute to a scientific basis for the art of language teaching that will become increasingly useful as emerging technologies make adaptation to individuals and groups more feasible.
