Sommario/riassunto	Most higher animals are said to be territorial, as a huge amount of work in ethology has made it clear. Human beings are no exceptions. They tend to occupy a certain space around them where they claim their own presence and exclude others quite naturally. If territory is so prevalent among higher animals including humans, then isn't it possible to observe its manifestations in aspects of human language? Territory of Information starts from this fundamental question and attempts to demonstrate the key function of the concept of territory in the informational structure and syntax of
