1. Record Nr. UNINA9910457218203321

Autore	Junkins John L
Titolo	Introduction to dynamics and control of flexible structures [[electronic resource] /] / John L. Junkins, Youdan Kim
Pubbl/distr/stampa	Washington, D.C., : American Institute of Aeronautics and Astronautics, Inc., c1993
ISBN	1-60086-207-1 1-60086-079-6
Descrizione fisica	1 online resource (467 p.)
Collana	AIAA education series
Altri autori (Persone)	KimYoudan
Disciplina	629.47
Soggetti	Large space structures (Astronautics) Structural dynamics Structural control (Engineering) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	""Cover""; ""Title""; ""Copyright""; ""Foreword""; ""Preface""; ""Table of Contents""; ""1 Introduction""; ""1.1 Some Biased Historical Notes""; ""1.2 Scope and Organization""; ""2 Mathematical Background: Matrix Analysis and Computation""; ""2.1 Introduction and Basic Notions""; ""Simultaneous Linear Algebraic Equations""; ""Numerical Methods to Solve the Least Square Problem""; ""Partitioned Matrix Inversion Formulas and the Matrix Inversion Lemma""; ""2.2 Matrix Decompositions""; ""Spectral Decomposition""; ""Singular Value Decomposition""; ""Cholesky Decomposition"" ""3.2 Lyapunov's Stability Theorem (Direct Method)""""""3.3 Stability of Linear Systems""; ""Lyapunov Theorem for Linear Systems""; ""Linear Dynamic Systems Subject to Arbitrary Disturbances""; ""Stability Analysis for Mechanical Second Order Systems""; ""3.4 Nonlinear, Time Varying, and Distributed Parameter Systems""; ""Local Stability of Linearized Systems""; ""What to do When U is Only Negative Semi-Definite""; ""Lyapunov Control Law Design Method""; ""Work Energy Rate Principle and Laypunov Stable Control Laws""; ""Globally Stable Tracking Controller: Lyapunov Approach""

""3.5 Case Study: Application for Near-Minimum-Time Large Angle Maneuvers of Distributed Parameter Systems""""Simulated Results for the Large Angle Maneuvers""; ""Experimental Results""; ""4 Mathematical Models of Flexible Structures""; ""4.1 Lagrangian Approach to Equation of Motion Formulation""; ""4.2 Infinite-Dimensional Models of Distributed Parameter Systems""; ""Classical Application of Hamilton's Principle""; ""Explicit Generalization of Lagrange's Equations""; ""The Differential Eigenvalue Problem""; ""4.3 Approximate Methods for Finite Dimensional Models""; ""Assumed Modes Method""
""Finite Element Method""""Comparison Between Two Spatial Discretization Models""; ""4.4 Case Study: Consequences of Neglecting Coupling between Rigid Motion and Elastic Motion""; ""5 Design of Linear State Feedback Control Systems""; ""5.1 Linear Optimal Control""; ""Necessary Conditions for Optimality""; ""Linear Regulator Problem""; ""Numerical Algorithms for Solving the Riccati Equations""; ""Generalized Linear Quadratic Regulator Formulations""; ""5.2 Robust Eigenstructure Assignment""; ""Sylvester's Equation""; ""Projection Method for Eigenstructure Assignment""
""Specialization for Mechanical Second Order Systems""
