Sommario/riassunto

Languages are dying at an alarming rate all over the world. Estimates range from 50% to as much as 90% by the end of the century. This collection of original papers tries to strike a balance between theoretical, practical and descriptive approaches to language death and language maintenance. It provides overviews of language endangerment in Africa, Eurasia, and the Greater Pacific Area. It also presents case studies of endangered languages from various language families. These descriptive case studies not only provide data on the degree of endangerment and the causes of language death, but als
