## Sommario/riassunto

A practical reference written to assist the security professional in clearly  
 identifying what systems are required to meet security needs as defined  
 by a threat analysis and vulnerability assessment. All of the elements  
 necessary to conduct a detailed survey of a facility and the methods  
 used to document the findings of that survey are covered. Once the  
 required systems are determined, the chapters following present how  
 to assemble and evaluate bids for the acquisition of the required  
 systems in a manner that will meet the most rigorous standards  
 established for competitive bidding. The book a
