

1. Record Nr.	UNINA9910457323703321
Autore	Chen Nancy N
Titolo	Food, medicine, and the quest for good health [[electronic resource]] : nutrition, medicine, and culture / / Nancy N. Chen
Pubbl/distr/stampa	New York, : Columbia University Press, c2009
ISBN	0-231-50891-3
Descrizione fisica	1 online resource (144 p.)
Disciplina	615.8/54
Soggetti	Diet therapy - Social aspects Functional foods - Social aspects Food habits Medical anthropology Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [119]-126) and index.
Nota di contenuto	Rethinking food and medicine -- Food as medicine -- Healing foods and longevity -- Dietary prescriptions and comfort foods -- Medicine as food -- Nutraceuticals and functional foods -- Genetically modified foods and drugs -- Eating and medicating.
Sommario/riassunto	What we eat, how we eat, where we eat, and when we eat are deeply embedded cultural practices. Eating is also related to how we medicate. The multimillion-dollar diet industry offers advice on how to eat for a better body and longer life, and avoiding harmful foods (or choosing healthy ones) is considered separate from consuming medicine another multimillion-dollar industry. In contrast, most traditional medical systems view food as inseparable from medicine and regard medicinal foods as the front line of healing. Drawing on medical texts and food therapy practices from around the world and throughout history, Nancy N. Chen locates old and new crossovers between food and medicine in different social and cultural contexts. The consumption of spices, sugar, and salt was once linked to specific healing properties, and trade in these commodities transformed not just the political economy of Europe, Asia, and the New World but local tastes and food practices as well. Today's technologies are rapidly changing traditional

attitudes toward food, enabling the cultivation of new admixtures, such as nutraceuticals and genetically modified food, that link food to medicine in novel ways. Chen considers these developments against the evolving food regimes of the diet industry in order to build a framework for understanding diet as individual practice, social prescription, and political formation.
