Descrizione fisica	1 online resource (231 p.)
Disciplina	612.6/2
Soggetti	Sex determination, Genetic Sex ratio Dominance (Psychology) Pregnancy - Psychological aspects Human evolution Testosterone Mothers - Psychology Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 201-213) and indexes.
Nota di contenuto	Book Cover; Title; Copyright; CONTENTS
Sommario/riassunto	Women who are dominant are more likely to have sons. Demographic studies show that more male children are born after wars, yet most people believe that their baby's sex is a matter of chance - determined by the father's sperm. Valerie Grant presents evidence that the mother's personality - which is related to female testosterone levels - can actually influence which type of sperm fertilises the egg. Using data from human and animal studies Valerie Grant discusses the implications for human evolution, developmental psychology and reproductive biology. Her claims are controversial and the imp
