| Sommario/riassunto      | High-throughput sequencing and functional genomics technologies<br>have given us a draft human genome sequence and have enabled<br>large-scale genotyping and gene expression profiling of human<br>populations. Databases containing large number of sequences,<br>polymorphisms, and gene expression profiles of normal and diseased<br>tissues in different clinical states are rapidly being generated for<br>human and model organisms. Bioinformatics is thus rapidly growing in<br>importance in the annotation of genomic sequences, in the<br>understanding of the interplay between genes and proteins, in the<br>analysis the genetic va |
