

1. Record Nr.	UNINA9910457497403321
Autore	Berrouk Abdallah Sofiane
Titolo	Stochastic Lagrangian modeling for large eddy simulation of dispersed turbulent two-phase flows [[electronic resource] /] / authored by Abdallah Sofiane Berrouk
Pubbl/distr/stampa	Sharjah, United Arab Emirates, : Bentham Science Publishers, [2011]
Descrizione fisica	1 online resource (130 p.)
Disciplina	551.51/5
Soggetti	Atmospheric turbulence Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	01 Title.pdf; 02 Cover Page; 03 REVISED eBooks End User License Agreement-Website; 04 DEDICATION; 05 CONTENTS; 06 Foreword; 07 PREFACE; 08 CHAPTER 1; 09 CHAPTER 2; 10 CHAPTER 3; 11 CHAPTER 4; 12 CHAPTER 5; 13 CHAPTER 6; 14 CHAPTER 7; 15 CHAPTER 8; 16 Appendix A; 17 Appendix B; 19 Glossary; 20 Author Index; 21 Subject Index
Sommario/riassunto	Understanding the dispersion and the deposition of inertial particles convected by turbulent flows is a domain of research of considerable industrial interest. Inertial particle transport and dispersion are encountered in a wide range of flow configurations, whether they are of industrial or environmental character. Conventional models for turbulent dispersed flows do not appear capable of meeting the growing needs of chemical, mechanical and petroleum industries in this regard and physical environment testing is prohibitive. Direct Numerical Simulation (DNS) and Large Eddy Simulation (LES) ha
