K BouchardStephane RivaGiuseppe Disciplina 610.28546 Soggetti Telecommunication in medicine Electronic books. Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Note generali Description based upon print version of record. Includes bibliographical references and index. Nota di bibliografia Nota di contenuto section 1. Critical reviews -- section 2. Evaluation studies -- section 3. Original research -- section 4. Clinical observations. The field of cybertherapy is becoming more widely accepted and Sommario/riassunto implemented. The advantages that tele-health and mobile health have to offer, such as more readily accessible medical records, reliable userfriendly health advice on demand and patient-centric care are undeniable, and have resulted in exciting advances in how the needs of patients and caregivers alike are addressed. Better educated patients are becoming more responsible and proactive, taking charge of their own health and adopting and adhering to healthier lifestyle choices, and the goal of a healthy population and more efficient and effective

healthcare becomes more attainable each day.
