

1. Record Nr.	UNINA9910457794703321
Autore	Peterson A. Townsend
Titolo	Ecological niches and geographic distributions [[electronic resource] /] / A. Townsend Peterson ... [et al.]
Pubbl/distr/stampa	Princeton [N.J.], : Princeton University Press, c2011
ISBN	1-283-30330-2 9786613303301 1-4008-4067-8
Edizione	[Course Book]
Descrizione fisica	1 online resource (329 p.)
Collana	Monographs in population biology ; ; no. 49
Classificazione	WH 4500
Altri autori (Persone)	PetersonA. Townsend <1964-> (Andrew Townsend)
Disciplina	577.8/2
Soggetti	Niche (Ecology) Niche (Ecology) - Mathematical models Biogeography Biogeography - Mathematical models Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	pt. 1. Theory -- pt. 2. Practice -- pt. 3. Applications.
Sommario/riassunto	This book provides a first synthetic view of an emerging area of ecology and biogeography, linking individual- and population-level processes to geographic distributions and biodiversity patterns. Problems in evolutionary ecology, macroecology, and biogeography are illuminated by this integrative view. The book focuses on correlative approaches known as ecological niche modeling, species distribution modeling, or habitat suitability modeling, which use associations between known occurrences of species and environmental variables to identify environmental conditions under which populations can be maintained. The spatial distribution of environments suitable for the species can then be estimated: a potential distribution for the species. This approach has broad applicability to ecology, evolution, biogeography, and conservation biology, as well as to understanding the geographic potential of invasive species and infectious diseases, and the biological implications of climate change. The authors lay out conceptual foundations and general principles for understanding and

interpreting species distributions with respect to geography and environment. Focus is on development of niche models. While serving as a guide for students and researchers, the book also provides a theoretical framework to support future progress in the field.
