

1. Record Nr.	UNINA9910458066103321
Autore	Eeten Michel van
Titolo	Ecology, engineering, and management [[electronic resource]] : reconciling ecosystem rehabilitation and service reliability // Michel J. G. van Eeten, Emery Roe
Pubbl/distr/stampa	Oxford ; ; New York, : Oxford University Press, 2002
ISBN	0-19-756171-3 1-280-83486-2 9786610834860 1-60119-680-6 0-19-534994-6
Descrizione fisica	1 online resource (279 p.)
Collana	Oxford scholarship online
Altri autori (Persone)	RoeEmery
Disciplina	333.95 577
Soggetti	Ecosystem management Environmental policy Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Previously issued in print: 2002.
Nota di bibliografia	Includes bibliographical references (p. 245-261) and index.
Nota di contenuto	Contents; Acronyms; 1 The Paradox of the Rising Demand for Both a Better Environment and More Reliable Services; 2 The Paradox Introduced: Concepts and Cases; 3 Adaptive Management in a High Reliability Context: Hard Problems, Partial Responses; 4 Recasting the Paradox through a Framework of Ecosystem Management Regimes; 5 Ecosystems in Zones of Conflict: Partial Responses as an Emerging Management Regime; 6 Ecosystems in Zones of Conflict: The Case for Bandwidth Management; 7 The Paradox Resolved: A Different Case Study and the Argument Summarized; Appendix: Modeling in the CALFED Program NotesReferences; Index
Sommario/riassunto	This book presents an introduction, overview and extension of ecosystem management and environmental restoration principles and applications. It develops a new framework and approach to improving

the environment through extensive case studies and analysis of environmental rehabilitation initiatives in the San Francisco Bay-Delta, Florida Everglades, Columbia River Basin in the Pacific Northwest, and the Green Heart region of western Netherlands. The book's comparative and integrative approach, with its grounding in ecology, engineering and management, will appeal to those working wherever population, resources and environment are in conflict.
