1. Record Nr. UNINA9910458239103321

Autore	Craig Catherine Lee
Titolo	Spiderwebs and silk : tracing evolution from molecules to genes to phenotypes / / Catherine L. Craig
Pubbl/distr/stampa	New York, New York : , : Oxford University Press, , 2003 ©2003
ISBN	1-280-47226-X 9786610472260 1-4237-5773-4 0-19-535163-0 1-60256-364-0
Descrizione fisica	1 online resource (257 p.)
Disciplina	595.4/4
Soggetti	Orb weavers - Evolution Silk Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Contents; 1 Silk Proteins: Breakdown and Evolutionary Pathways; 2 The Comparative Architecture of Silks, Fibrous Proteins, and Their Encoding Genes in Insects and Spiders; 3 The Mechanical Functions of Silks and Their Correlated Structural Properties; 4 Insect Spatial Vision Is a Potential Selective Factor on the Evolution of Silk Achromatic Properties and Web Architecture; 5 Insect Color Vision Is a Potential Selective Factor on the Evolution of Silk Chromatic Properties and Web Design 6 Insect Learning Capacity Is a Potential Selective Factor in the Evolution of Silk Color and the Decorative Silk Patterns Spun by Spiders7 Inter-Gland Competition for Amino Acids and the ATP Costs of Silk Synthesis; 8 A One-Dimensional Developmental System and Life-Long Silk Synthesis May Preclude the Evolution of Higher Eusociality in Spiders; 9 Conclusions and Looking Forward; References; Index
Sommario/riassunto	Links the molecular evolution of silk proteins to the evolution and behavioral ecology of web-spinning spiders and other arthropods. This

book presents an integrated understanding of an interesting biological system at the molecular and organizational levels.
