| Sommario/riassunto | In recent decades, resource-rich developing countries have been using their natural resources as collateral to access sources of finance for investment, countervailing the barriers they face when accessing conventional bank lending and capital markets. One of the financing models that have emerged as a result is the Resource Financed Infrastructure (RFI) model, a derivation of previous oil-backed lending models pioneered by several Western banks in Africa. Under a Resource Financed Infrastructure (RFI) arrangement, a loan for current infrastructure construction is securitized against the net |
