### Sommario/riassunto

This paper is a first report on an ongoing project aiming at building up a database of non-canonical argument marking in Lithuanian in contrast to other languages with relatively rich systems of morphological cases. The language with which we begin the comparison is Icelandic. The overarching aim consists not only in a unified inventorialisation of relevant units, but in disclosing (i) regularities in the alternation of coding patterns and (ii) the factors underlying such variation. We will concentrate on case marking; this however implies agreement patterns as well, insofar as in these two langu
