Sommario/riassunto	Accounting and Distributive Justice challenges the basic assumptions on which the current practice of financial reporting is based. It argues that the objective of financial reporting should be to contribute to the achievement of distributive justice and not the optimal allocation of resources as in the traditional capitalist paradigm. It explains in non-technical terms the principle philosophical theories of justice and argues that a firm has a moral responsibility to seek distributive justice in its dealings with its shareholders, employees, suppliers, customers, and other people
