Nota di bibliografia Nota di contenuto Comparing productivity of the Japanese and US automobile industries -- The internationalization of the Japanese automotive industry and local production overseas -- The recovery of European and US auto makers, and relocating and changing lean production -- Early 1990s: the Japanese automotive industry loses international competitiveness, and the development of restructuring strategies -- The restructuring of the global automotive and auto-parts industries -- The restructuring of the world's auto-parts industry and the transfiguration of the keiretsu parts transaction -- Global M & A and the future of the global auto industry: the light and dark sides of merger and re-alignment -- The

Asian and ASEAN automotive industries in the global era -- China's automotive industry in the global era, Japanese auto makers, and their

China strategies -- Conclusion: the global automotive industry's

Sommario/riassunto

perspective on the twenty-first century and tasks for the Japanese automotive industry.

The Japanese automotive industry enjoyed spectacular success in the 1980s. This was largely due to the so-called 'Lean Production System' - the combination of an efficient production system, an effective supplier system, and a product development system. In the 1990s the industry fell on hard times because of the Japanese asset price bubble and extreme currency appreciation. In this book, eminent industry specialist Koichi Shimokawa draws on his thirty years of research and fieldwork with Japanese and American firms, to show how the Japanese automotive industry has managed to recover from this difficult period. He shows how firms like Toyota were able to transfer Japanese systems to overseas plants and how they have changed in order to compete in increasingly globalized markets. In addition, the book also addresses the two major challenges to the current industry model: the rise of China and the environmental and energy supply situation.
